LS3: Dealing with Customers Tickets

7 Dealing with customers

FOUNDATION: Ticketing systems

Situation: You work in Customer Support at Entavia ERP. You use the ticketing system to react to user issues.
→ **You fill out a completed support ticket.**

1 Understanding a ticket

You receive a problem customer support ticket for a part of the ERP system.

A Match the lists of values (1–5) to the parts of the ticket (a–e) below.

1 new · open · in progress · pending · on hold · closed · reopened · backlog
2 showstopper · severe · moderate · minimal · negligible
3 fixed · won't fix · duplicate · incomplete · cannot reproduce · deferred
4 bug · minor bug · task · incident · question · feature request
5 urgent · high · medium · low

Purchasing is down

Edit | Comment | Assign | Resolve this issue | Respond to customer

Type: a | Status: c | Severity: e
Priority: b | Resolution: d | Component/s: Public website

Description: Customers are getting an error message on the website.

B For each of the following tickets, what values would you assign to the ticket options in brackets?

1 Users report that purchase orders are taking longer than usual to generate but are still completing eventually. No customers are directly affected. Ticket has been assigned. (priority, status, severity)
2 The colour scheme on the dashboard is inconsistent but does not affect functionality. The issue has been acknowledged but isn't scheduled for immediate resolution (severity, resolution, type)
3 The system has started generating duplicate customer records during data entry. While it doesn't stop operations, it causes confusion and extra work for users. (severity, type, priority)
4 The ERP system fails to integrate with a third-party payment gateway after an API update. Payments cannot be processed until the issue is resolved. (status, severity, resolution)
5 The sales team requests a feature to automate reporting for monthly KPIs. The request has been logged and awaits prioritization by the development team. (type, status, priority)
6 A financial report fails to generate for the Finance department due to a missing data configuration. Other departments are unaffected. Cause has been found and fixed. (status, resolution, type)

2 Filling out a ticket

You fill out the ticket after resolving the issue.

Complete the gaps in the ticket with the missing phrases.

confirmed the root cause · Implemented additional testing · Initially displayed · issue was reproduced · no action or functionality · permissions were corrected · review the update process · Reviewed and adjusted · was identified as · which caused the

Reporting and resolving issues
Use short and direct statements where the past tense verb is often the first word in the statement.
- **Adjusted** the update configuration.
- **Restored** the missing invoice template file.
- **Scheduled** periodic reviews.

Issue summary
Customers reported being unable to create invoices in the system. Upon investigation, it was found that clicking 'Save' during the invoice creation process resulted in ___[1]. No error messages were ___[2].

Investigation findings
The ___[3] and it was observed that the system failed to save invoices due to a missing invoice template file. The template file ___[4] absent from the system after a recent update.
The update process had skipped several files, including the invoice template, ___[5] functionality to break.
After restoring the file, a permissions error prevented the system from accessing the restored file.

Resolution steps
Restored the missing invoice template file from the most recent system backup.
File ___[6] to allow the system to access and use the restored template.
___[7] the update settings to prevent file skipping during future updates.
Re-tested the update process in a safe environment to ensure it now correctly includes all necessary files.

Post resolution actions
Performed a successful test of the invoice creation process to confirm functionality was restored.
Used AI analysis to ___[8], which ___[9] was an improperly configured update script.

Preventative measures
Adjusted the update configuration to ensure all critical files are included during deployment.
___[10] steps for updates, including validation checks for required files.
Scheduled reviews of system backups and permissions.

3 Completing a support ticket

Sales representatives report that customer records in the CRM system are not saving correctly after they make updates. When they try to save changes, the system freezes for several seconds and no changes are recorded.

Issue is only occurring for updates to specific types of customer records. The system works fine for other operations, such as creating new records.
A CRM plugin for bulk editing was updated last night.
The updated plugin introduced a conflict with the CRM's save function for customer records.
Disabled the plugin temporarily. Tested saving records again. Verified functionality was restored. Contacted the plugin vendor for a patch
Update testing procedures to include plugin compatibility checks. Implement a sandbox environment to test updates before deployment

Write down what you would put in a ticket to explain the above.

ERP (enterprise resource planning) system – *Warenwirtschaftssystem (WWS)*
CRM = customer relationship management
sandbox – *Sandkasten, (Software-)Testumgebung*

PART A: Set-up and customization

Situation: You have joined Customer Success at Entavia ERP systems and assist new customers in the set-up and configuration of their ERP system.
→ **You show a customer how to set up and configure their software.**

1 Understanding a dashboard

Match the words from the list to the correct part (1–8) of the reports.

cards · column · horizontal bar chart · legend · line chart · pie chart · row · vertical bar chart

2 Setting up a dashboard

You listen to a colleague helping a new customer to get started with their ERP system.

A Listen to the dialogue and answer the following questions.

1 Is the user logging in?
2 Which modules do they have installed?
3 Which app is not visible to the user?
4 Which button do they need to click on to add items to the dashboard?
5 What type of chart is recommended for monthly revenue in the year to date?
6 What two options are recommended for sales per country?
7 How are KPIs added?
8 What is the data source selected for KPIs?

Guiding a customer to set up software
Sequential instructions: each response provides clear, step-by-step actions for the user to follow.
Objective and neutral tone: the language is direct and informational, focusing on the tasks without subjective comments.
Minimal context: instructions are straight-forward, offering necessary guidance without extensive explanations.

25 **B Listen to the dialogue again and take notes on the following parts of the set-up.**

1 what to do to find and install the accounting module
2 how to access and open the dashboard app
3 how to find and install the dashboard app if it isn't visible
4 what to do to add new items to the dashboard
5 which specific settings to configure when setting up the monthly revenue chart
6 how to finalize configuring the monthly revenue chart
7 the options and steps when adding the sales per country chart

3 Customizing a dashboard

You write an email to a customer who has some specific needs for their dashboard.

Dear Alexandra
We hope you're enjoying your experience with Entavia Online. To help you gain valuable insights into your business, we'd like to guide you through customizing your dashboard with specific cards, blocks and charts tailored to your needs.

1 Monitoring leads
To keep track of your lead generation, add a numeric card displaying your total leads and new leads. This provides an instant overview of your sales prospects.
If you want to observe trends in lead acquisition, use a line chart to plot leads over the year. This helps identify peak periods and inform your marketing strategies.

2 Analysing sales performance
If you need to see monthly revenue in the year to date, select a bar chart for your dashboard. This visualizes your revenue trends and highlights growth patterns.
To understand your market distribution, use a geographical map chart showing sales per country. This offers a clear picture of your international performance.

3 Tracking customer behaviour
For insights into customer loyalty, add a pie chart displaying the percentage of repeat purchases versus new customer purchases. This metric is crucial for retention strategies.
To see total customers and new customers acquired, add a card for each. This keeps you informed about your expanding customer base.

A Say what the customer should do to …

1 track lead generation.
2 observe trends in lead acquisition.
3 see monthly revenue in year to date.
4 understand market distribution.
5 get insights into customer loyalty.
6 see how many new customers have been acquired.

Linking needs to actions
To monitor X, **set up** a …
If you **want** a snapshot of X, **add** a …
To keep track of leads, **select** a line chart.
For insights into sales by country, **use** a pie chart.

B **Create phrases to guide a customer on what to set up for the following needs. The first one has been done for you. Use phrases from the language box on page 73.**

1 monitor customer churn / numeric card showing number of customers lost
To monitor customer churn, set up a numeric card showing the number of customers lost over a period.
2 snapshot of your financial performance / card on your dashboard showing the year-to-date revenue
3 assess potential revenue / a funnel chart of your pipeline
4 track your profitability over time / a line chart to display monthly profit trends
5 quick snapshot of your spending / numeric card showing total expenses year to date
6 where your expenses are allocated / use a pie chart to represent costs by category
7 assess your profitability ratios / bar chart comparing revenue and costs
8 primary contributors to your expenses / a bar chart listing your top cost drivers

4 Guiding a customer

Now it is time to guide a customer who has contacted Customer Support for help to set up their dashboard.

Work with a partner. Partner A: You work in Customer Support; Partner B: You are the customer.

Read the clues about how to set up a dashboard and create a dialogue between the customer and support person. The customer should explain their issue and ask questions of the customer support person. The tone for both should be professional and polite.

Access the dashboard module
- main menu / left-hand side / 'Dashboard' button
- not visible / ensure installed or search for 'Dashboard' / search bar / top of the screen

Enter edit mode
- dashboard view / button 'Edit' / 'Customize' / top-right corner
- click 'Edit' / screen should allow adding or modifying widgets

Add widgets to the dashboard
- 'Edit' mode / option 'Add widget' / button in the sidebar
- instruct the user to:
  - browse available widgets / look for examples 'KPI metrics', 'Graph View', 'List View' or 'Pivot table' widgets
  - select widget / clicking on it
  - drag and drop widget / desired location

Configure widget settings
- adding / configure it / settings panel
- instruct the user to:
  - select data source for the widget (e.g. specific modules like 'Sales', 'Inventory' or 'CRM')
  - display settings: set filters for specific time periods, teams or conditions (e.g. 'Sales this Month')
  - apply changes / ensure saved

Save and view dashboard
- all widgets are added and configured / 'Save' button / top-right corner of dashboard
- exit 'Edit' mode / review to ensure all widgets display data as expected
- widgets show 'No data':
  - double-check / data source settings and filters
  - ensure / user has permissions to view the selected data

Customer statements and questions › *Useful phrases: Describing processes, page 159*

- Help / set up / dashboard
- How / add / widgets / ?
- How / save / dashboard / ?
- How / enter / 'Edit' mode / ?
- Where / widget settings / ?
- What / widget shows / no data / ?
